

WE ARE THE FIRST ZIPPER COMPANY TO TRANSITION OUR STANDARD OFFER TO 100% RECYCLED POLYESTER

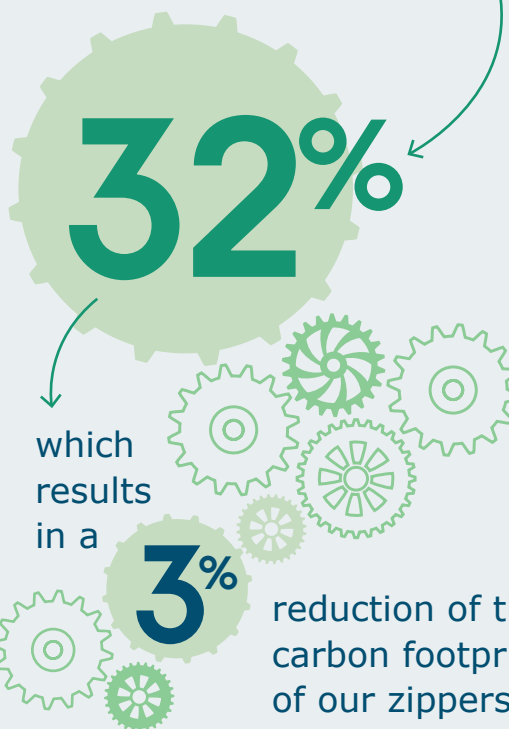

INNOVATION FOR THE FUTURE

Innovation has always been and remains core for us, in the design, quality and functionality of our products but, importantly so, in our contributions to reducing the impact on the environment.

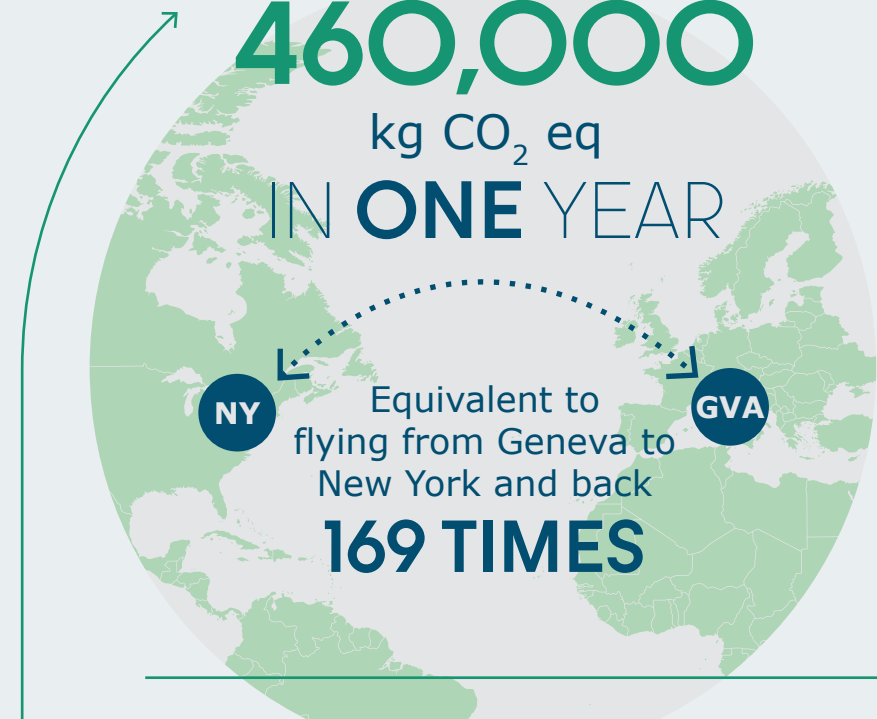

Design for circularity is a fundamental and consequential rethink of the economic and social model to date, which requires extensive change. Our innovation relies on a meticulous and continuous search for materials with a low environmental impact, combined with our determination to avoid the use of virgin plastic.

BY USING ONLY RECYCLED POLYESTER

as opposed to virgin polyester we have reduced the raw material emissions of our polyester products by

AVOIDING 460,000 kg CO₂ eq IN ONE YEAR

SDG Target Alignment with 13.2 "Integrate climate change measures into national policies, strategies and planning"

We first introduced a zipper tape with recycled polyester in 2013 and, since then, we have been steadily increasing the use of **GRS (Global Recycled Standard)** certified polyester.

The recycled polyester used in our zipper tape is made from ecological polyester fibers from post-consumer (80%) and pre-consumer (20%) contents.
