

100% RECYCLED POLYAMIDE

Material sheet

FEATURES

- 100% recycled material
- High recyclability
- The tensile modulus: values for recycled polymer grades differ very little from virgin grades

100% recycled polyamide is obtained exclusively from recycled raw materials, sustainable polymers based on valuable post-production feedstocks (fiber yarn and film production waste). Recycled polymer is much more environmentally friendly than prime-grade materials in all aspects considered, from CO₂ emissions to water consumption and renewable energy sources. All the data are certified by the world-renowned EPD (Environmental Product Declaration) organization: compare it to its virgin base countertype, it vaunts 47% less water consumption, 80% lower CO₂ emissions and 60% less non-renewable resource utilization.

On request it is available on:

- buttons
- pullers
- zip chains: DE8E GE and TBC
